Fludeoxyglucose (^{18}F)

[^{18}F]Fludeoxyglucose ([^{18}F]FDG) is the most commonly used radiopharmaceutical in clinical positron emission tomography (PET) imaging. It is a radioactive glucose analog and accumulates in tissues with high glucose metabolism. [^{18}F]FDG is mostly used in the field of oncology and provides highly accurate diagnosis and assessment of disease stage and therapeutic response.

Product specifications

Fludeoxyglucose (^{18}F)
185 MBq/ml at calibration time and date
Solution for injection
Store in the original package at room temperature
Expiry is 6:00 pm for calibration 10:00 am, 11:00 pm for calibration 2:00 pm
pH 4.5 – 8.5
Radiochemical purity ≥ 95%

✓ AVAILABILITY:
Monday to Friday (Saturday on special request)

✓ CALIBRATION:
10:00 am, 2:00 pm CET same day
(5:00 pm on special request)

✓ PACKAGING:
15 ml multi-dose colorless glass vial – Type I

✓ ORDERING:
Curium Pharma

To calculate a precalibration activity, divide the activity at calibration time by the decay factor.
For a postcalibration activity, multiply the activity at calibration time by the decay factor.
